# Image Validation and Analysis - Claims

With more claims being settled by photos alone, Attestiv finds that
over 20% of claims photos exhibit anomalies and may have signs of fraud

The Attestiv integration with Duck Creek is a fundamental building block to enable insurance carriers and TPA's to save costs by making faster and more accurate claims decisions, while also reducing fraud risk.

With this no-code integration, we offer fraud reduction while providing a foundation for straight-through processing and touchless automation. Available across personal and commercial lines, including auto, home, business and personal property.

Customer Benefits

Claims-based reporting
Receive an aggregated report that provides at-a-glance whether a claim requires further inspection

Up to 50x in fraud reduction in real-time
Real-time multi-point photo analysis allows for detection of specific characteristics in a photo within a claim that may require further attention

80%+ reduction in photo anomalies
Photo anomalies identify discrepancies across photos within a claim. These indicate that further review is required

Enables straight-through processing
By helping to automate the claims process with Attestiv validated photos

Over 90% improvement in image quality
Our AI analysis identifies photos with poor image quality or are of low resolution and flags them for further review. No more second-guessing your images

Reduce settlement losses
Attestiv's industry-leading and patented technology improves the confidence of the claims process

Get started with Attestiv

With Duck Creek platform integration, insurance companies can deploy the Attestiv technology with no heavy lifting.

Simple steps to start:

1. Select the **Go to Package** option from the Attestiv Content Exchange page
2. Follow instructions to create your account
3. Start analyzing claims images
