

Image Validation and Analysis - Claims

Integration and Reporting

By selecting the "Attestiv Image Validation and Analysis" option in a file note, all attached claims images are immediately validated and analyzed by Attestiv's powerful integration.

From the Results area in Duck Creek, users can view the provided report to see how these photos scored and be able to take appropriate action.

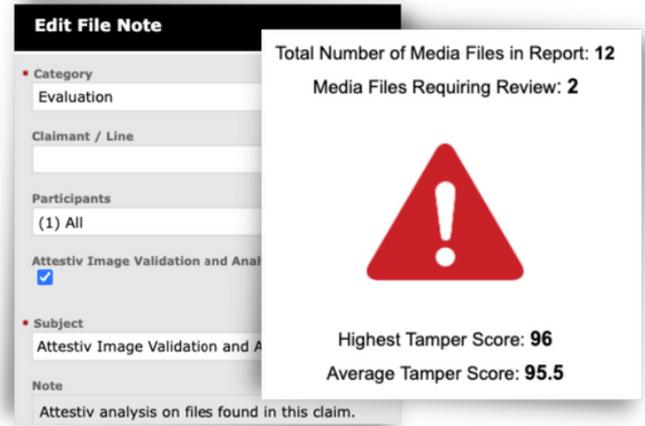

Image Audit and Analysis

The tamper score, ranging from 1-100, determines whether media requires human review or is suitable for automation and straight-through claims processing.

Attestiv detects photo anomalies and/or fraud with its patented technology and AI analysis producing an aggregate tamper score for each image.

Feature Highlights

- ◆ Each individual image is fingerprinted so it can be validated at any point in the future eliminating the risk of the same image being used in multiple claims
- ◆ Exposes the photo(s) time, date and location
- ◆ Reduces need for manual validation of photos
